

Specialist Diploma in Lean & Quality Systems

Overview

Duration: 1 year

Schedule: Part-time

Starting: September 2011

Fees: €2,000

Closing Date: Thursday 30 June 2011

- Curriculum focused on the topical area of Lean, Six Sigma and Business Process Improvement
- Green belt material covered to enable students to top off their academic award with an industry standard professional qualification
- Delivery via blended learning teaching methodologies
- Medium-term up-skilling for career advancement or specialisation and/or re-skilling for career change or cross-team roles

Entry Requirements

Applicants must be in receipt of the Diploma in Science & Technology Studies or a related Diploma or higher qualification. Applicants may use experience in addition to academic qualifications to demonstrate that they satisfy the course prerequisites.

What Type of Course is it?

This one-year, part-time Diploma programme aims to promote an in-depth knowledge of the thinking and techniques behind Lean and Quality Systems in industry. Participants will gain knowledge of the Lean, Six Sigma and various other techniques and systems for streamlining products, processes and services. Problem solving skills will be developed and honed. A focused project module will require participants to apply their knowledge to real-world scenarios.

The programme is delivered by blended learning, participants receive learning materials in both online and in hard copy format for each module. Materials are specifically designed for independent study and will be supplemented by supporting online learning resources where appropriate. The programme requires attendance on campus for approximately 12 hours per module, mainly on Saturdays.

How Will I Benefit?

The course is intended for those who wish to focus their skills with a view to moving into specialist and hybrid lean roles e.g. internal lean consultants, waste minimisation specialists, process optimisation advisors. It will allow those with basic engineering qualifications to up-skill and specialise in lean engineering if taken as a 'top up' course. It will also allow those in declining sectors to convert their skills and transfer their experience to the sector e.g. unemployed manufacturing managers, operatives and technicians. Expertise in Lean and Six Sigma is currently in strong demand across all sectors.

On completion of the course will have highly marketable, up-to-date and confidence-building knowledge and skills relevant to product, process and service optimisation and improvement. They will have practiced and been assessed on a range of technical and transferable skills which will be beneficial at the personal, enterprise and community levels.

If graduates so wish they can progress to the B.Sc. in Science & Technology Studies (NQF level 8) with credit for their studies. In this case they will be exempt from one elective stream in the Degree cycle.

Learning Objectives

On completion of the course participants should have:

- expert problem solving skills
- an appreciation of lean thinking and lean tools
- good technical knowledge of quality science and specialist knowledge of six sigma techniques
- technical knowledge of enterprise modelling and simulation with a view to optimising business processes
- an appreciation of lean and quality systems within manufacturing and services sectors
- built their capabilities in the area of change management to facilitate continuous business process improvement

Curriculum

This Specialist Diploma consists of four inter-related taught modules and a project, each worth 6 ECTS, giving a total of 30 ECTS.

The four taught modules are:

- Problem Solving Tools & Techniques
- Enterprise Modelling & Simulation
- Lean Thinking & Lean Tools
- Quality Science-Six Sigma

The [module contents](#) are presented at the end of this document.

The project topic is chosen by you in consultation with your supervisor and will be company based where possible.

Assessment

Assessment of the taught modules is through continuous assignments, written examinations and in some cases practical laboratory sessions. Exams take place at the end of each semester. The project is assessed through staged delivery of a project report. The award mark is based on an average result of all five modules.

In addition to the academic qualification it is proposed that students will have the opportunity to present for Green Belt certification in semester two if they choose, so that they will concurrently achieve a professional qualification.

Course Structure

The course is offered over one academic year (September to May) on a part-time basis. Two taught modules are complete each semester (September to December and January to May) while the project is completed over the academic year.

Fees

The fees for the course are €2,000 for E.U students and €2,500 for non-E.U students. This fee includes;

- Registration
- Tuition fees
- Course materials
- Examinations and assessments

The cost of the Green Belt professional certification is not included. The student should register for this exam separately if they choose. Currently the American Quality Association Green Belt exam costs €200.

How Do I Apply?

Applications should preferably be made online at: www.nuigalway.ie/apply
Alternatively an application form can be downloaded at www.modularbsc.ie
The closing date for receipt of applications is **Thursday 30th June 2011**.

Module Contents

BST113 Lean Thinking & Lean Tools

- Unit 1: History and Application of Lean Thinking
- Unit 2: Value Stream Mapping
- Unit 3: Cellular Manufacturing
- Unit 4: Work Standardisation and Standard Work
- Unit 5: Just-In-Time Manufacturing and Kanbans
- Unit 6: Single Minute Exchange of Dies (SMED)
- Unit 7: Creating and Sustaining an Orderly Work Environment with 5S
- Unit 8: Kaizen
- Unit 9: Visual Management and the Visual Factory
- Unit 10: Overall Equipment Effectiveness (OEE)
- Unit 11: Total Preventative Maintenance (TPM)
- Unit 12: Jidoka, Poke Yoke and Quality
- Unit 13: Lean Supply Chains
- Unit 14: Lean Product Development and Quality Function Deployment
- Unit 15: Building a Lean Organisation
- Unit 16: Lean Systems: Case Systems

BST114 Quality Science Six Sigma

- Unit 1 History and Development of Quality Science
- Unit 2 Review of the Six Sigma Methodology
- Unit 3 The Statistical Summary
- Unit 4 Statistical Tests I

Unit 5	Establishing Linear Relationships
Unit 6	Multiple Regression
Unit 7	Multiple Regression II
Unit 8	Non-Parametric Tests
Unit 9	Process Control Concepts
Unit 10	Process Capability Indices
Unit 11	Statistical Process Control
Unit 12	Statistical Process Control for Variable Data
Unit 13	Statistical Process Control for Attribute Data
Unit 14	Short Run SPC
Unit 15	Introduction to Design of Experiments I
Unit 16	Introduction to Design of Experiments II

BST115 Problem Solving Tools & Techniques

Unit 1	Foundations of Six Sigma: Principles of Quality Management
Unit 2	Principles of Six Sigma
Unit 3	Project Management
Unit 4	Project Selection and Definition
Unit 5	Process Measurement – Part I
Unit 6	Process Measurement – Part II
Unit 7	Process Analysis – Part I
Unit 8	Process Analysis – Part II
Unit 9	Process Improvement – Part I
Unit 10	Process Improvement – Part II
Unit 11	Process Control – Part I
Unit 12	Process Control – Part II
Unit 13	Design for Six Sigma: Concept and Design Development – Part 1
Unit 14	Design for Six Sigma: Concept and Design Development – Part II
Unit 15	Design for Six Sigma: Optimisation and Verification
Unit 16	Design for Six Sigma Implementation

BST116 Enterprise Modelling & Simulation

Unit 1	Introduction to Enterprise Modelling
Unit 2	Common Enterprise Modelling Tools and Techniques
Unit 3	Product Modelling and the Product Development Process – Introducing the Role of CAD and CAM
Unit 4	Introduction to Simulation
Unit 5	Business Process Reengineering – An Overview
Unit 6	Enterprise Modelling For Business Process Improvement
Unit 7	Case Study: Business Modelling for Improvement in the Medical Industry
Unit 8	Case Study: Business Modelling in the Pharmaceutical Industry
Unit 9	Case Study: Modelling and Simulation in the Animal Feed Supply Industry
Unit 10	Case Study: Modelling and Simulation of a Food Supply Chain
Unit 11	Case Study: Enterprise Modelling Activity for Process Improvement at a Hospital
Unit 12	Case Study: Business Process Improvement Activity at an Accountancy Firm
Unit 13	Case Study: Business Process Modelling in a Manufacturing Company
